

Hazardous Environmental Project Guarantee.

If the Origin product is under 2000m from a hazardous environment, for example the sea/swimming pool then we recommend that you choose our Hazardous Environmental Guarantee. This guarantee will be valid for 1 year, unless the extended warranty is registered when it will increase to 10 years. Origin will determine the orders that will require the environmental guarantee using the postcode on registration.

If the Origin product is in a hazardous environment we would recommend that you select the powder coated option for all hinges and handles. This will mean that you either select our standard white/black hardware or the colour coded option. The range of solid stainless steel lever handles are a marine grade 316 stainless steel, so one of these could be selected.

If the Origin product is not registered with us within 120 days of delivery date the standard one year guarantee will apply.

Origin products that are within 2000m of the hazard require regular maintenance. Origin will supply instructions outlining how regularly this maintenance will need to be carried out.
